link analysis

introduction to network science in Python (NetPy)

Lovro Šubelj University of Ljubljana 14th Dec 2021

link analysis

which web pages are most important?

- node centrality measures for (un)directed networks
- link analysis algorithms primarily for directed (web) graphs
 - Google search ranking PageRank [BP98, PBMW99]
 - hyperlink-induced topic search HITS [Kle99]

Sergey Brin

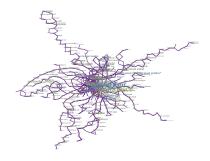

Lawrence Page

Jon Kleinberg

networkology LPP

- corrected LPP public bus transport network*
- n = 408 bus stops with $\langle k \rangle = 5.73$ connections
- giant component 95.3% nodes (6 components)
- "small-world" with $\langle C \rangle = 0.10$ and $\langle d \rangle = 14.43$
- "scale-free" with $\gamma = 2.60$ for cutoff $k_{min} = 5$

^{*} reduced to largest connected component

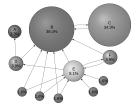

analysis PageRank

ranking algorithm for web page importance

— for directed G PageRank rank p [BP98] of i is – α is positive constant traditionally set $\alpha = 0.85$

$$p_i = \alpha \sum_j A_{ij} \frac{p_j}{k_j^{out}} + \frac{1 - \alpha}{n}$$

p_i probability random surfer with teleports lands on i

networkology PageRank

- PageRank ranks p in corrected LPP network
- highest p nodes are Razstavišče and Ajdovščina

#	bus stop	k_i	pi
1	Razstavišče	43	0.010601
2	Ajdovščina	36	0.007694
3	Bežigrad	23	0.007161
4	Bavarski dvor	30	0.007013
5	Konzorcij	30	0.006884
6	Gosposvetska	30	0.006527
7	Stara cerkev	26	0.005485
8	Sava	12	0.005165
9	Tobačna	22	0.005136
10	Kino Šiška	18	0.004907
11	Medvode	4	0.004853
12	Tivoli	26	0.004838

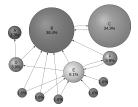

analysis SimRank

ranking algorithm for web page similarity

— for directed G SimRank rank s [TFP06] for t of i is $-\alpha$ is positive constant traditionally set $\alpha=0.85$

$$s_i^t = \alpha \sum_j A_{ij} \frac{s_j^t}{k_j^{out}} + (1 - \alpha)\delta_{it}$$

— s_i^t probability random surfer with teleport t lands on i

networkology SimRank

- SimRank ranks s in corrected LPP network
- highest s nodes for Razstavišče and Hajdrihova

#	bus stop	k_i	s _i	
1	Razstavišče	43	0.236115	
2	Bavarski dvor	30	0.065124	
3	Bezigrad	23	0.057260

11	Glince	8	0.027528
12	Na klancu	10	0.023836

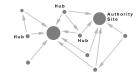

analysis *HITS*

ranking algorithm for web hubs & authorities

- for directed G hub & authority ranks h & a [Kle99] of i
 - h is eigenvector of A^TA with eigenvalue $(\alpha\beta)^{-1}$
 - a is eigenvector of AA^T with eigenvalue $(\alpha\beta)^{-1}$
 - α and β are appropriate positive constants

$$h_i = \alpha \sum_j A_{ji} a_j$$
 $a_i = \beta \sum_j A_{ij} h_j$

- a measures content and h measures table of content
- a = 0 for $k^{in} = 0$ nodes and h = 0 for $k^{out} = 0$ nodes

networkology HITS

- hub & authority ranks h & a in corrected LPP network
- highest h node is Ajdovščina and highest a node is Konzorcij

a; 0.656745 0.512119 0.235790 0.224651 0.176839 0.172509 0.172482 0.161840 0.110391 0.106024 0.096486 0.088636
